DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
2. The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 7 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
4. Regarding Claims 7 and 9, it is unclear what structural features characterize an apparatus that comprises a "mechanical fuse." It is unclear whether a mere ingot of any shape would suffice or whether a three component apparatus, such as described in Claim 1, is necessary. See the discussion of the uncertainty of the meaning of this terminology in the submitted letter regarding applicant's German patent application 101 58 306.0-12.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
6. A person shall be entitled to a patent unless –
7. (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
8. Claims 1, 3, 5-8, 10, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Akutsu USPN 4,943,321. Akutsu teaches a synchronizer ring comprised of a sintered porous iron ring, wherein the ring is comprised of the claimed ingredients and may be further plated with NiP and would be expected,

Art Unit: 1775

by virtue of its porous structure, to obtain the claimed pore roundness. See Akutsu (Abstract; Figure 1; col. 1, line 61 through col. 2, line 19; col. 3, lines 30-45; and Table 5). See the discussion of the expected inherent presence of the claimed material in Akutsu in the submitted letter regarding applicant's German patent application 101 58 306.0-12. Akutsu USPN 4,943,321 corresponds to DE 3808460. While Akutsu does not seek to obtain an article that would break, it would be expected that the material of Akutsu would necessary be subject to breaking at high enough torque, meeting the fuse requirement. Akutsu does not teach shot peening, but the claimed shot peening may be considered inherently achieved since no particular degree of shot peening is required. The claimed article may be indistinguishable from those of Akutsu having residual compressive stress.

Response to Amendment

9. In view of applicant's arguments and amendments, applicant traverses the section 112, first paragraph rejection of the Office Action mailed on 15 June 2005. Rejection is withdrawn.
10. New rejections are presented above in view of applicant's recently submitted foreign patent office report.

Allowable Subject Matter

11. Claim 19 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1775

12. Claim 9 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
